TECHNICAL SPECIFICATION FOR SAFETY

INTRODUCTION

Before using this product, be sure to read this chapter carefully.

This chapter describes safety precautions when using the relay. Before installing and using the equipment, read and understand this chapter thoroughly.

It's not a secret – electricity can be dangerous and when things go wrong lives can be at stake!

Electrical engineers are Industrial safety doctors, so it's our duty to keep employees health and maintain a quality of life that we all deserve by providing safe work practices to avoid electrical accidents.

How much electricity is dangerous?????

CURRENT	EFFECT
0.5 – 3mA	Tingling sensations
3 – 10mA	Muscle contractions (painful)
10 – 40mA	"can't let go" phenomena
40 – 75mA	Respiratory paralysis (possibly fatal)
75 – 200mA	Ventricular fibrillation (likely fatal)
200 – 500mA	Heart clamps tight
>1.5A	Tissue and organs began to burn

Fact: A 15 amp circuit breaker was designed to protect equipment – not people!

The relay is developed with zero percentage of risk factor by its own design. The current carrying paths and circuits are isolated from the metal case and structure. Suitable clearance depending on the type of insulation required for different classes are provided.

The relay confirms to Product safety requirement standard IEC 60255-27.

HEALTH AND SAFETY

It deals with the handling of relay in proper way. An individual to be considered as 'qualified' with regard to certain equipment in the workplace, but 'unqualified' as to other equipment. "An employee, who is undergoing on the job training and who, in the course of such training, has demonstrated the ability to perform duties safely at his or her level of training and who is under the direct supervision of a qualified person also considered to be a qualified person for the performance of those duties."

The following requirements must be met, in the order given, before circuits or equipments are re-energized, even temporarily.

- ✚ People handling the equipment should be aware about the relay safety handlet.
- ✚ Ensure that the product is in the off condition before working on the conducting or terminal side.
- ✚ A qualified person must conduct tests and visual inspections, as necessary, to verify that tools electrical jumpers, shorts, grounds and other such devices have been removed, so that the circuits and equipments can be safely re-energized.
- ✚ Employees exposed to the hazards associated with re-energizing the circuit or equipment must be warned to stay clear of the circuits and equipment.
- ✚ Each lock and tag must be removed by the employee who applied it or someone else under that employee's direct supervision.
- ✚ A visual determination that all employees are clear of the circuits and equipments must be made.

For any queries related to relays, feel free to contact ALIND.

SYMBOLS AND LABELS USED IN THE RELAY

1. FRONT SIDE

Caution: refer to equipment documentation

Caution: risk of electric shock

Caution: Over voltage Cat.III

2. REAR SIDE

**WARNING**

1. No user serviceable components inside.
2. Refer servicing to authorized personnel.

Protective Conductor (*Earth) terminal
Functional/Protective Conductor (*Earth) terminal.

CMOS Battery provided for the RTC (Real Time Clock) purpose. Confirm polarity of the battery while replacing.

IEC 61850 sticker

WARNING**Current transformer circuit**

Never allow the current transformer (CT) secondary circuit connected to this equipment to be opened while the primary system is live. Opening the CT circuit will produce a dangerous high voltage.

**Exposed terminals**

Do not touch the terminals of this equipment while the power is on, as the high voltage generated is dangerous.

**Residual voltage**

Hazardous voltage can be present in the DC circuit just after switching off the DC power supply. It takes about 30 seconds for the voltage to discharge.

CAUTION**Earth**

Earth the earthing terminal of the equipment securely.

**Operation conditions**

Use the equipment within the range of ambient temperature, humidity and dust as detailed in the specification and in an environment free of abnormal vibration.

**Ratings**

Before applying AC voltage and current or DC power supply to the equipment, check that they conform to the equipment ratings.

**Printed circuit board**

Do not attach and remove the printed circuit board while the DC power to the equipment is on, as this may cause the equipment to malfunction.

**External circuit**

When connecting the output contacts of the equipment to an external circuit, carefully check the supply voltage used and prevent the connected circuit from overheating.

**Connection cable**

Carefully handle the connection cable without applying excessive force.

Modification

Do not modify this equipment, as this may cause the equipment to malfunction, and any such cases, warranty may be affected.

DECOMMISSIONING AND DISPOSAL

De-commissioning

The supply input (auxiliary) for the equipment may include capacitors across the supply or to earth. To avoid electric shock or energy hazards, after completely isolating the supplies to the equipment, the capacitors should be safely discharged via the external terminals prior to de-commissioning.

Disposal

When disposing of this equipment, do so in a safe manner according to local regulations. It is recommended that incineration and disposal to water courses is avoided. Ensure the relay is in de energized condition and take precautions to avoid short circuits.

TECHNICAL SPECIFICATIONS FOR SAFETY

1. Protective class

IEC 60255-27:2005	Class I	(This equipment requires a protective conductor (earth) connection to ensure user safety.)
-------------------	---------	--

2. Environment

IEC 60255-27:2005	Pollution degree 2	(Normally only non-conductive pollution occurs except occasionally a temporary conductivity caused by condensation is to be expected.)
-------------------	--------------------	--

3. Overvoltage Category

IEC 60255-27:2005	Category III	(The auxiliary energizing circuits of the equipment are connected to a common battery, common mode transient voltages of a relatively high value may appear on the supply leads, and differential mode voltages may arise from switching in other circuits connected to the same battery)
-------------------	--------------	---

4. Contact data

Test voltage across open contact: 1 kV DC for 1 min source.

INTRODUCTION

AN SERIES DESCRIPTION

PREVIOUS HISTORY OF TRANSFORMER PROTECTION RELAYS

BRIEF DESCRIPTION OF RELAYS

MAIN FUNCTIONS

GENERAL FUNCTIONS

AN+ SERIES (ALIND NUMERICAL SERIES)

- Advanced Digital Fourier Transform based Numerical algorithm design using 32-bit Digital Signal Controller (DSC).
- Compact Construction covering several protection modules saving panel space.
- Man-Machine Communication through 20x4 character LCD display and LEDs.
- Self supervision of both hardware and software units.
- Interface ability with SCADA through IEC 60870-5-103 & IEC 61850 communication protocol.
- Facility for storing fault waveforms (Disturbance recorder) and events with date and Time stamping. At a time a total of 5000 events and 200 latest fault waveforms (Disturbance recorder) will be stored in the relay.
- Graphical User Interface for Harmonic analysis, DC analysis and di/dt analysis can be done on the uploaded fault waveforms with facility for report generation.
- Facility to access/modify the relay settings both online as well as through menu in local PC through SCADA at RCC.
- Relay Indication (LED) reset from RCC.
- Suitable password protection.
- IP 54 grade enclosure protection.
- SNTP (Simple Network Time Protocol) & optional GPS based IRIG -B time code standard Synchronization Facility.
- Settable CT ratios.
- Online primary or secondary current display on relay LCD
- Relay operation counter

PREVIOUS HISTORY OF DIFFERENTIAL PROTECTION RELAYS

TMADT+TDTA

Static Type.

ATD 12

Numerical Integrated transformer differential protection relay

Disturbance & event recorder.

Built in counter facility.

ANTD

The relay is the modified version of our ATD 12 (AN Series) relay. The relay incorporates Instantaneous, IDMT curve, 3 stage definite time over current protection, Post over load protection.

ANTD 201:

The relay conforms to RDSO specification No. TI/SPC/PSI/PROTCT/6071. ANTD 201 (AN Series) relay is a comprehensive Integrated Transformer Differential Protection relay for the protection of conventional 27 KV AC single phase, 50Hz Over Head Equipment (OHE).

ANTD 401:

The relay conforms to RDSO specification No. TI/SPC/PSI/PROTCT/7100(07/2012). ANTD 401 (AN Series) relay is a comprehensive Integrated Transformer Differential Protection relay for the protection of 2x25 KV (AT feeding system) AC single phase, 50Hz Over Head Equipment (OHE).

Designed as per RDSO specification no. TI/SPC/PSI/PROTCT/7101 and 6072.

DESCRIPTION OF PROTECTION FUNCTIONS

AR85 relay is a comprehensive Current Differential Protection relay for the protection of

- 2x25 KV (AT feeding system) Scott connected Tx. Differential Protection
- 2x25 KV (AT feeding system) V connected Tx. Differential Protection
- 2x25 KV (AT feeding system) AT Differential Protection
- 25KV single phase Tx. protection

Differential 1 & Differential 2 protections are included in the relay. Differential 1 is using for the protection of Secondary earthed and un-earthed Transformers (Scott/V) and Auto Transformers. Differential 2 is using for the protection of LV bus up to transformer LV CB in Secondary Un-earthed Transformer system (Scott).

GENERAL FUNCTIONS

HANDLING OF RELAY

STORAGE

RELAY AND RACK MOUNTING

CASE DIMENSIONS

HANDLING OF RELAY

Protective relays generally of robust construction require careful treatment prior to installation on site. Care must be taken when unpacking and installing the relays so that none of the parts are damaged. Relays must be handled by skilled personnel. The following should be taken into account while handling the relay:

- ✦ The relay use components that are sensitive to electrostatic discharges. The relay comprises of various semi-conductor devices which can damage if touched by means of direct contact. Handle the cards in static free environment since electrostatic discharge can affect performance of the relay or cause damage to the cards.
- ✦ The electronic circuits are well protected by the metal case and the internal module should not be withdrawn unnecessarily.
- ✦ The relay is normally shipped in separately packed condition. After unpacking, see if there is any mechanical damage to the cabinet, the nameplate, terminal blocks etc. Damage of any such sort identified shall be intimated to works.
- ✦ Avoid plugging in/ pulling out the cards when the power is ON.
- ✦ Do not apply CT inputs when auxiliary supply is switched OFF.
- ✦ If the cards are withdrawn for testing, ensure proper positioning while replacing.
- ✦ Keep the relays in well-packed condition in a dust-free dry environment without direct exposure to sunlight.

The relay is shipped from factory after detailed testing by our Quality Control Department. However, according to the customer requirement the relay settings/ functions can be verified before commissioning at respective sites with proper testing kits.

STORAGE

If relays are not to be installed immediately upon receipt, they should be stored in a place free from dust and moisture in their original boxes. At most care should be taken while storage.

Storage temperature: -25°C to +55°C.

LCD DISPLAY

A 20 x 4 LCD display is provided for easy viewing of parameters, relay settings, fault event records, date& time, error counter etc. The display backlit can be made ON by pressing any push button key except H.Rst key and the display backlit leaves for about 20 seconds. Backlit automatically turns on when any tripping occurs on the relay

Navigation Keys

The relay is provided with four switches.

Menu key

- * Main key for entering relay setting mode.
- * If you want to select anything in the setting mode, we can use this key.
- * To reset the relay from tripping mode.

Increment key

- * If you want to raise any particular setting, we can use this option.
- * For saving any particular changes in the relay, you can hire this key.
- * For viewing new options in the relay, we can use this key.

Decrement key

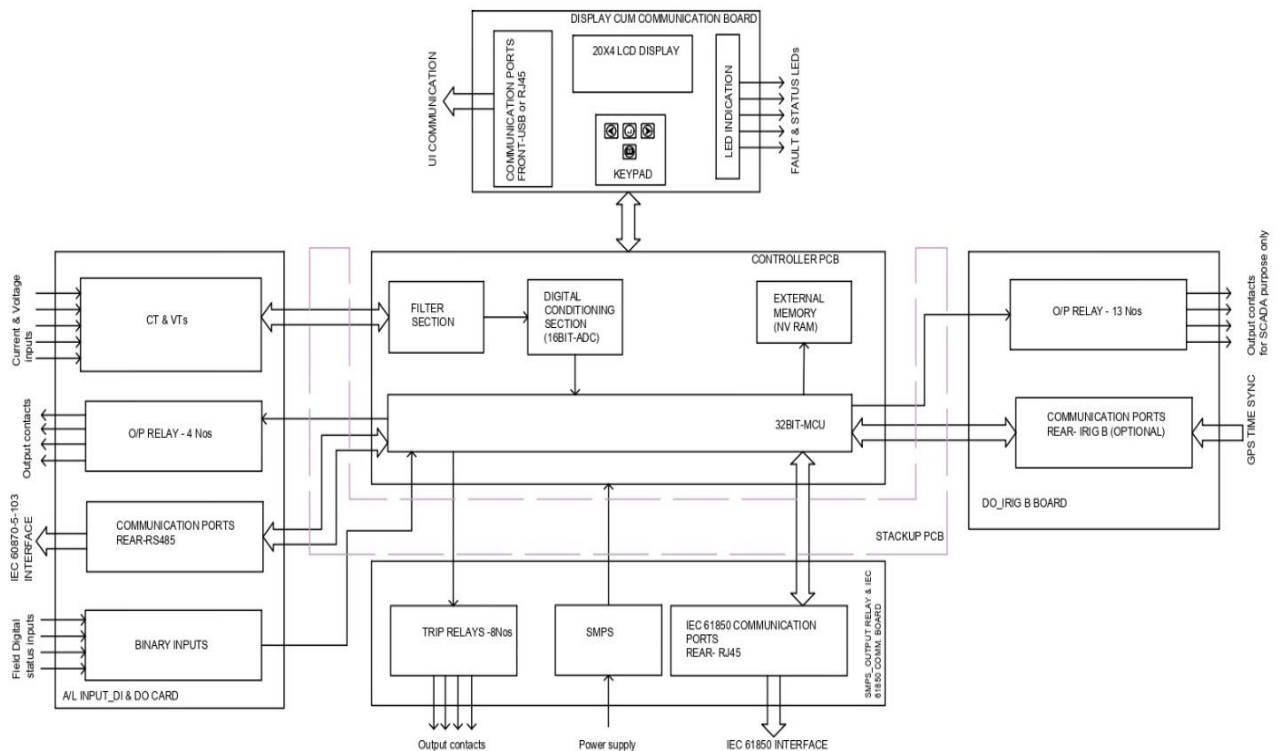

- * If you want to lower any particular setting, we can use this option.
- * No need to save any unwanted mistakes in the relay you can use this key.
- * If you want to verify any previous settings in the relay, you can opt this key.

Records key

- * If you want to check the logs and data stored in the relay memory, you can use this key.

INTERNAL ARCHITECTURE AND BLOCK DIAGRAM

The internal system level architecture of relay including card to card architecture in brief is shown below.

1.DSP Controller

The 32bit MCU (Digital Signal Controller) machine that combines the control advantages of a high-performance 32-bit microcontroller with the high computation speed of a fully implemented Digital Signal Processor (DSP).

The MCU controller continuously monitors the currents. Based on this the controller performs different calculations and whenever an abnormal condition occurs it distinguishes the type of fault and issues trip command to the circuit breaker.

2. Data Acquisition

The Current signals are scaled and isolated using Current Transformer (CT). These isolated analog signals are filtered to minimize the effects of electromagnetic interference and noise in the high frequency range.

The analog signals are then fed to the Analog to Digital Converter which has a 16 bit resolution. The DSP controller will take the 32 samples per cycles of Current for the computational purpose. If any fault occurs the parameters will be stored in to the non-volatile memory with date and time stampings and this can be downloaded for further analysis in the disturbance recorder.

3. Power Supply Module

This module gives the necessary regulated voltages like +5V, -5V, and +24V to various cards in the module. The normal operating voltage range is 45 VDC to 170 VDC. The +24V is used for driving the output relays in the I/O card and O/P relay card. The +5V and -5V is supplied to the processor, I/O card and Display PCB for normal relay operations. The isolated +5V is dedicated to the communication ports of the relay.

4. Communication Module

The relay is having three communications port, Front port: RJ45, Rear port: ETHERNET & RS485. The relay is using IEC 60870-5-103 & IEC 61850-communication protocol for communication through RS485 & ETHERNET.

Front Port:

1) Communication Port

RJ 45 port shall be provided for uploading/downloading relay settings and events.

Rear Port:

a) RS 485 Communication Port

RS 485 port shall be provided for SCADA connectivity. Using RS485 port fault online data of critical parameters, disturbance record, and event record (Trip data) etc shall be downloaded. The communication protocol shall comply to IEC 60870-5-103 protocol.

b) Ethernet Communication Port

Ethernet port shall be provided for IEC 61850 connectivity. Using Ethernet port fault online data of critical parameters, disturbance record, event record (Trip data) etc. shall be downloaded. SNTP time synchronization is possible through the same. Ethernet port can either be copper/fiber depending upon the tender requirement.

5. Man Machine Interface

Man Machine Interface is through a 20x4 LCD display and keys in the front panel of the relay. Necessary LEDs are provided in front panel for indicating the operation of different element.

6. Disturbance Recorder

The relay has the facility to record 50 cycles (45 pre-fault and 5 post faults) of fault waveforms. Latest 200 waveforms of Current can be stored in the relay. This data is retrievable through front and rear communication ports using UI software and SCADA respectively.

7. Event Recorder & Disturbance Recorder

The relay is capable of storing 5000 number of events with date and time stamping of 1ms accuracy. The event data comprise of:

Tripping of different protection elements (I, Fault clearing time, Fault date & time)

Trip circuit supervision

Relay pick up

Relay reset

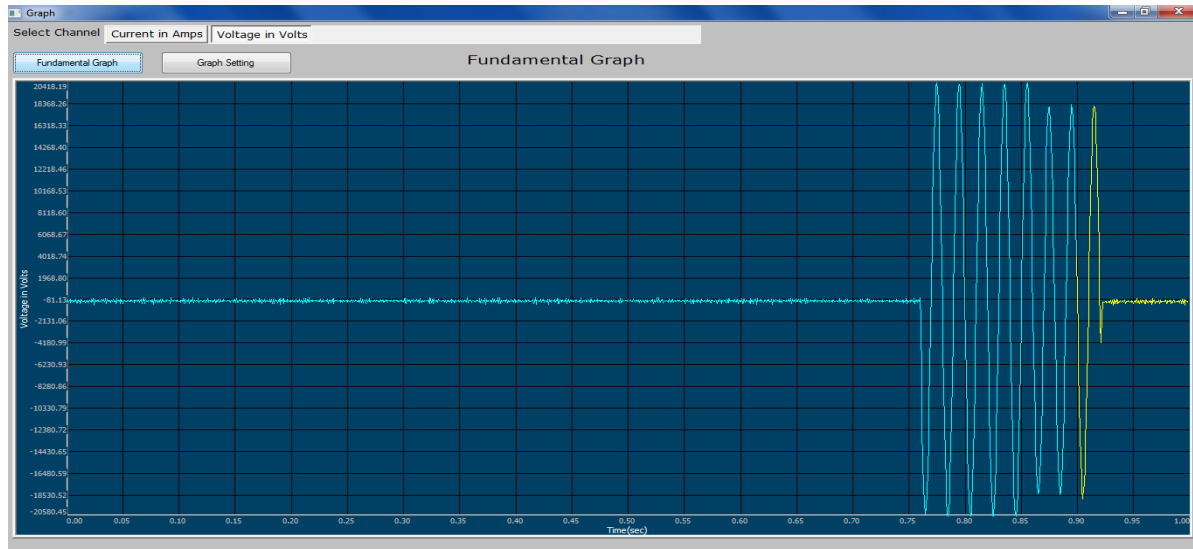

CB Trip

CB Close

Change of status input

Relay setting changed (GUI & Keypad)

Relay Error.

ENERGIZING THE RELAY

1. Before turning ON the relay, proper earthing should be provided.
2. Visual Inspection for any physical damage in housing, display etc shall be checked.
3. Operating voltage range: **45 to 170 VDC.**
Operating voltage: **110 V DC.**
4. Prefer regulated power supply of 110VDC.
5. Auxiliary power supply shall be provided to the corresponding terminals with the help of an MCB.
6. Switch on the power supply. Measure the voltage between the corresponding terminals and ensure that the voltage is within the normal operating range.
7. After the relay is powered ON, the following shall be noticed.

Protection healthy LED glow green in color which indicates that the relay is functioning OK, otherwise it goes amber.

PCB DESCRIPTION

The relay comprises of the following hardware.

Main PCBs. –Display PCB, Controller PCB, Stack PCB, status & CT, PT PCB, SMPS & trip relay PCB, Tele Annu PCB, Back panel PCB

Display cum Communication PCB (640 261): The Display PCB is mounted at the front plate of the unit. It consists of the 20x4 LCD, LED indications, Keyboard circuits, LED controller and front RJ 45 communication port.

Controller PCB (640 262): The Controller PCB is mount on the backside of the Display PCB. This PCB consists of major components such as DSP controllers, ADC and its filter circuits, Memory ICs, RTC etc. The Analog signal get filtered and digitized in this board. The DSP takes decision based on this digital samples and initiates necessary commands.

Stack PCB (640 263): Internal communications between the PCB's are ensured with the help of stack PCB.

Status & CT,PT PCB (640 264): All the CTs, PTs and Input status lines are assembled in this board. IEC 60870-5-103 communication port also provided in this PCB.

SMPS & Trip Relay PCB (640 265): The SMPS PCB provides the necessary Power supply voltages to the different PCBs mounted inside the relay. The SMPS provides +24V, +5V, -5V and isolated +5 V. The +24 V supply is used for the driving the output relays. The +5V and -5V is supplied to the controller PCB, Display PCB, and I/O PCB for normal operations. The isolated +5V is dedicated to the communications ports of the relay. This board (trip relay PCB) will give necessary trip commands to the master trip relay or breaker, which is installed in the yard. Necessary relay initiating signals are wired to these output relays from the Controller Board.

Tele Annu PCB (640 266): All the Telesignalling output circuits are assembled in this PCB. IRIG B circuit also provided in this PCB.

Back Panel PCB (640 267): This PCB consists of terminal blocks for external interface with the site and power connectors, which connects SMPS, I/O and CT PT PCB's. The RS 485 port is also mounted in this PCB. The terminal block (TB-A) is having CT shorting facility. Since the rack with Terminal Blocks is having the CT shorting facility, the relay can be withdrawn.

RELAY ONLINE DISPLAY PARAMETERS

After Power ON, the relay boot screen shows

Then comes the online parameter display

Window 1:

Window 2:

To scroll between online displays, press **Right** key after holding \leftarrow key.

Setting Mode

Press and hold \leftarrow for 5 seconds

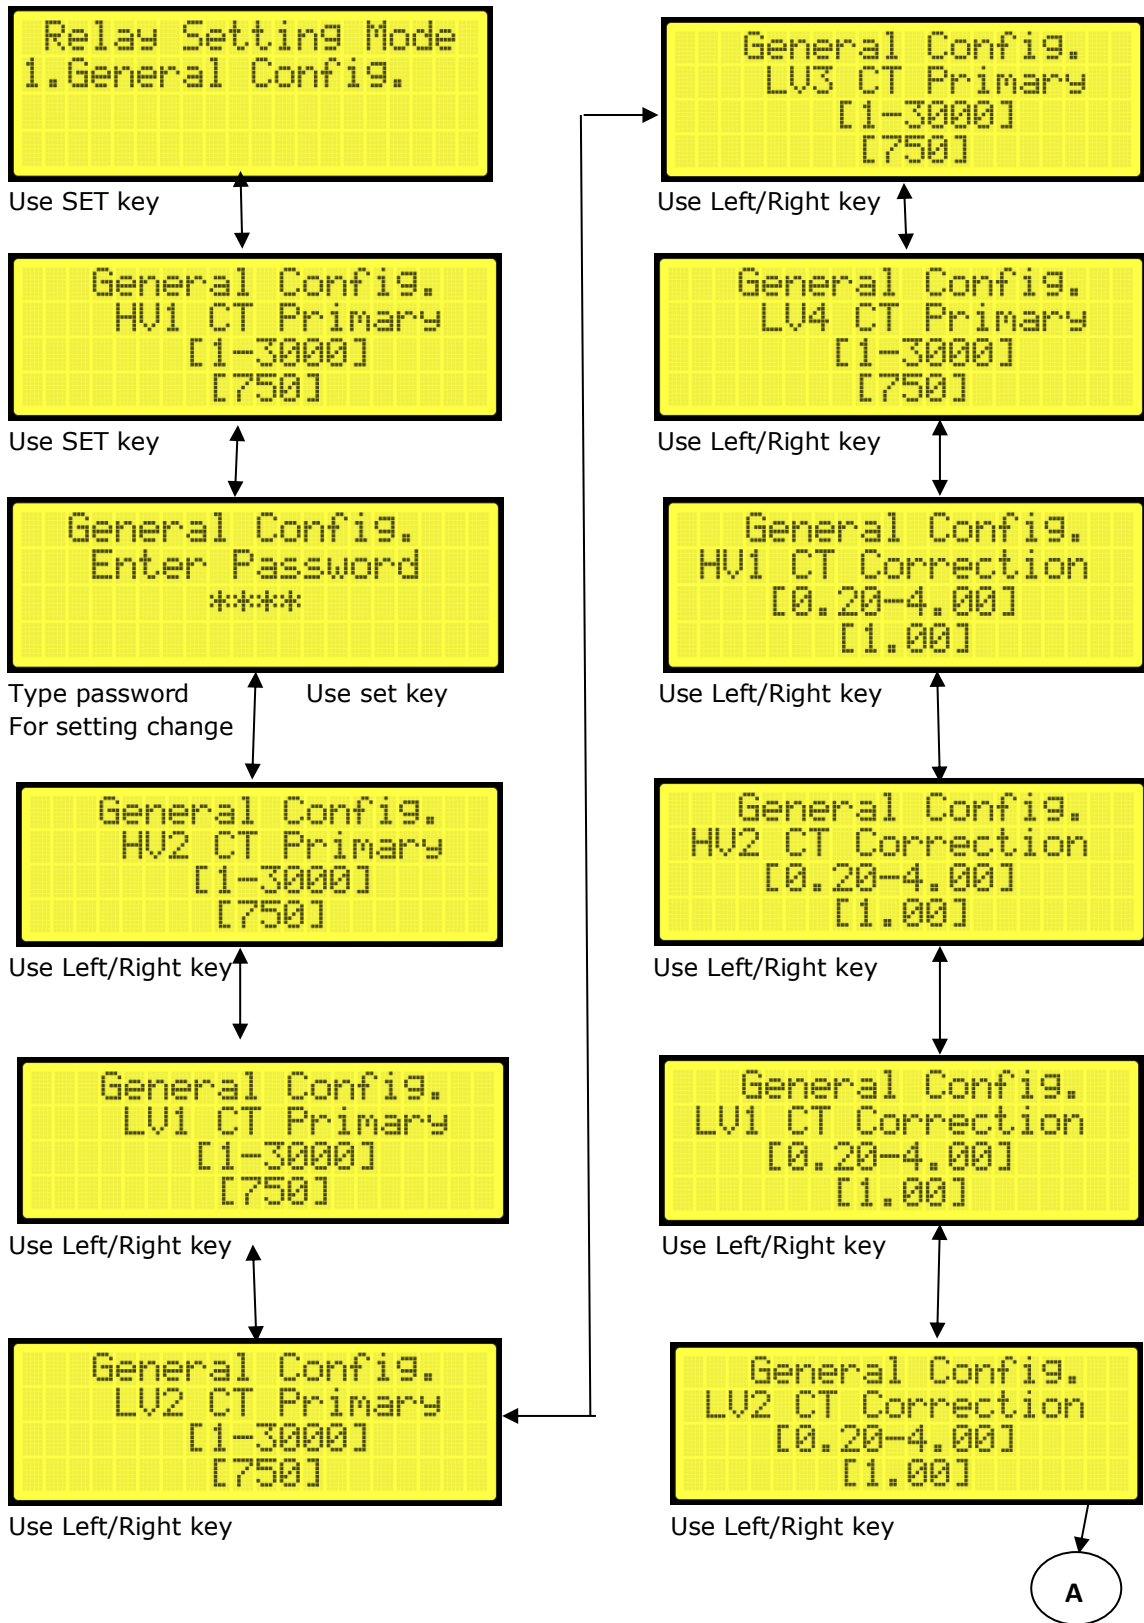

Relay will enter to setting mode.

Enter the password and press \leftarrow key. The default password setting is '1000'

To change settings:

- a) Press \leftarrow to change the settings.
- b) Press **Right** key to increment
- c) Press **Left** key to decrement
- d) Press \leftarrow to accept change.
- e) To coming back to main **MENU** while operating, press **Left** and **Right** key simultaneously.
- f) Repeat the process for all settings
- g) After completing the settings, the relay shows the message '**SETTINGS UPDATED**' and returns to the operating mode.

DESCRIPTION OF PROTECTION FUNCTIONS

TECHNICAL SPECIFICATIONS

GENERAL SETTINGS

TB DETAILS

SETTING GUIDELINES

RELAY CONFORMING STANDARDS

DESCRIPTION OF PROTECTION FUNCTIONS

RELAY CHARACTERISTICS

I) Biased differential protection.

Percentage biased differential protection ensures insensitivity to all external faults, including the most severe.

II) Dual slope characteristics

The basic principle of operation involves the comparison of currents at the terminal of the unit to be protected. The relay measures the HV current (I1) and LV current (I2) of the Transformer through the bushing CTs and calculates the Differential current ΔI ($I1 - I2$) and the bias current $((I1 + I2)/2)$. The relay is having dual slope characteristics with bias setting. The relay provide trip command when

$$|I1 - I2| \geq S | (I1 + I2) / 2 |$$

Where S = set bias

BIAS CHARACTERISTICS

Where FTP – First Turning point
STP – Second Turning point

III) Trip Circuit Supervision

Relay consists of two numbers of trip circuit supervisions (Post close and pre close). The relay continuously monitors the tripping coil DC (110V -ve) supply through the NC or NO contacts of the Circuit breaker in both open & closed condition. If any discontinuity is observed, the relay generates alarm signal.

TECHNICAL DETAILS

Sl. No	Specification	REF.	Particulars
1.	Auxiliary Supply	V _{DC}	35 to 260 VDC
2.	Current Input(rated)	In	5 Amps
3.	Frequency	F _n	50 Hz
4.	VA burden on CT		Less than 0.5 VA
5.	VA burden on Aux		Less than 15 Watts (for energized condition)
			Less than 10 Watts (for De-energized condition)
6.	Operating Temp Range		-25°C to + 55 °C
7.	Max. & Minimum relative humidity		5% to 95%
8.	Continuous Current Carry Capacity of CT		4I _n ; 20 A
9.	Thermal Withstand for CT		100I _n for 1 sec
10.	Contact details		
	a) Current carrying capacity		Continuously ≥ 5 Amps at 110 V DC Short time ≥30 Amps for 200 ms at 110 V DC
	b) Making capacity at 110V DC		≥ 1000 W at L/R = 40ms
	c) Breaking Capacity at 110V DC		≥ 30 W at L/R = 40ms
11.	Trip Circuit Test		Yes / No
12.	Type of communication ports		RJ 45 and RS485
13.	Overall dimensions		
	Width		263 mm
	Height		173 mm
	Depth		300 mm
14.	Weight		5.6 kg approx.

RELAY CONFORMING STANDARDS

The relay conforms to the following standards:

SI No.	Standards	Description
I.	IEC 60255-151	FUNCTIONAL REQUIREMENTS FOR OVER/UNDER CURRENT PROTECTION.
II.	IEC 60255-5	INSULATION COORDINATION OF MEASURING RELAYS AND PROTECTION EQUIPMENT- REQUIREMENTS AND TESTS.
III.	IEC 60255-1	MEASURING RELAYS AND PROTECTION EQUIPMENT- COMMON REQUIREMENTS.
IV.	IEC 60255-21-1	VIBRATION TESTS (SINUSOIDAL)
V.	IEC 60255-21-2	SHOCK AND BUMP TESTS
VI.	IEC 60255-21-3	SEISMIC TESTS
VII.	IEC 60255-27	PRODUCT SAFETY REQUIREMENT.
VIII.	IEC 60255-26	ELECTROMAGNETIC COMPATIBILITY REQUIREMENT.
IX.	IEC 60529	DEGREES OF PROTECTION PROVIDED BY ENCLOSURES (IP CODE)
X.	IEC 61810-2	RELIABILITY.
XI.	IS 2705 (PART II, III&IV)	PROTECTIVE CURRENT TRANSFORMERS.
XII.	IS 3231 (PART 1 TO 3)	ELECTRICAL RELAYS FOR POWER SYSTEM PROTECTION.
XIII.	IS 8686	STATIC PROTECTIVE RELAYS.
XIV.	IEC 60068-2	ENVIRONMENTAL TESTS.
XV.	IEC 60870-5-103	COMMUNICATION PROTOCOL

TROUBLE SHOOTING

Under normal working conditions, the 'PROTECTION HEALTHY LED' provided in the front panel of the relay glows green. The same LED turns amber to recognize any fault inside the relay itself.

Following are certain guidelines for the relay to identify the nature of fault and necessary checking procedures to be adopted at site so that relay can be rectified suitably.

Sl. No.	Faults	Checks	Causes
1	No power ON Indication or No display.	1. Check the auxiliary DC supply to the relay rear terminals 2. Check the continuity of the output terminal, after disconnecting the wires.	1. Due to power supply failure, the LED turns off. 2. The varistor may short circuited to protect internal circuitry on transients
2	Current Not reading/ Out of tolerance limit.	1. Refer TB sticker for CT inputs. 2. Check for the earthing of CT. 3. Check if the terminals of TB-A is connected properly or for any loose contact. 4. Check CT ratio and multiplying factor if any. 5. Check the continuity of the output terminal, after disconnecting the wires. After checking of the above, measure the current using calibrated Clamp-On meter. If not OK, intimate to works.	1. The CT connector is having shorting facility. If the connector is not tight, CT secondary may get some low resistance path through the connector itself. 2. If CT is not properly earthed, there is a chance of leakage current that may cause error in CT reading.
4	Relay Error Indication	1. Intimate to works. 2. Press H.RST key in the relay front panel.	1. Supply variation to internal PCB's. 2. DC supply fail.

OVERVIEW

IEC 60870-5-103 is a standard for power system control and associated communications. It defines a companion standard that enables interoperability between protection equipment and devices of a control system in a substation. The device complying with this standard can send the information using two methods for data transfer - either using the explicitly specified application service data units (ASDU) or using generic services for transmission of all the possible information.

The IEC 60870-5 protocol is based on the three-layer reference model 'Enhanced Performance Architecture' (EPA), as specified in clause 4 of IEC 60870-5-3. The physical layer copper-wire based system that provides binary symmetric and memoryless transmission.

The link layer consists of a number of link transmission procedures, using explicit Link Protocol Control Information (LPCI), that are capable of carrying Application Service Data Units (ASDUs) as link user data. The link layer uses a selection of frame formats to provide the required integrity, efficiency, and convenience of transmission.

The application layer contains a number of application functions that involve the transmission of Application Service Data Units (ASDUs) between source and destination.

The application layer of this companion standard does not use explicit Application Protocol Control Information (APCI). This is implicit in the contents of the ASDU Data Unit Identifier and in the type of link service used.

PHYSICAL LAYER

Connection is possible with IEC 60870-5-103 via rear RS485 port of relay as seen in figure 1 below.

1. TX/RX_HI correspond to Data +ve.
2. TX/RX_LOW correspond to Data -ve.
3. ISO_GND correspond to GND.

Figure 1

GENERAL INFORMATION

Relay ID: Settable from 1 to 255 via relay HMI.

Baud Rate: Settable from 4800 – 57600 via relay HMI.

No. of data bits: 8

No of stop bits: 1

Parity: None

Measurand Scaling Factor: 2.4

PROTOCOL MAPPING

INFORMATION NUMBER: INF

ASDU TYPE: TYP

CAUSE OF TRANSMISSION: COT

FUNCTION NUMBER: FUN

GENERAL INTERROGATION: GI, marked with 'X' wherever applicable.

COM: Indicates whether relay generated event on rising edge only (0 - 1) indicated by ↑ or both rising and falling edge (0-1 and 1-0) indicated by ↑↓.

MEASURANDS IN MONITOR DIRECTION

Measurands are scaled with a scaling factor of 2.4. To obtain the actual value from raw value, following formulae can be used.

$$\text{Actual Value} = \left(\frac{\text{Raw Value} \times 2.4}{4096} \right) \times \text{Primary CT/PT value}$$

Model Implementation Conformance Statement
for the IEC 61850 interface in ALIND AR 85 relay version 1.0

Based on
UCA International Users Group
Testing Sub Committee

Template version 1.0
Date: April 24, 2008

TITLE: MICS DOCUMENT FOR AR 85 RELAY	MICS Ver.	2.0
	DATE: 24 FEBRUARY 2024	
	ALUMINIUM INDUSTRIES LTD RELAYS DIVISION, THIRUVANANTHAPURAM	

1. Introduction

This model implementation conformance statement is applicable for ALIND AR 85 relay. The definitions of all used Logical Devices, Logical Nodes and their associated Common Data Classes, components and associated enumerated values are also included for completeness.

This MICS document specifies the modelling including extensions compared to IEC 61850 Edition 2.

2. Logical Device

Logical Device	Description
CONTROL	Controls Domain

3. Logical Node List

Following list contains list of logical node classes implemented in device

G: Logical Nodes for generic references	
GGIO (Generic Process I/O)	
L: System Logical Nodes	
LLNO (Logical device LN)	
LPHD (Physical device LN)	
M: Logical Nodes for metering and measurement	
MMXN (Non-Phase Related Measurements)	
P: Logical Nodes for protection functions	
PDIF (Differential)	
PIOC (Instantaneous Overcurrent)	
R: Logical nodes for protection related functions	
RBRF (Breaker Failure)	
RDRE (Disturbance Recorder Function)	

4. Logical Nodes

The following table use

- M: Data object is mandatory in the IEC 61850-7-4 ED.2.
- O: Data object is optional in the IEC 61850-7-4 ED.2 and is used in the device
- E: Data object is extension to the IEC 61850-7-4 ED.2 and is used in the device

4.1 Logical Node: CNTRL_GGIO1

Description: Generic Process I/O

LN Class: GGIO

Data Object	CDC type	Description	M/O
Common Logical Node Information			
Beh	ENS	Behavior	M
Controls			
SPCSO1	SPC	Generic single point controllable status output (RCC Reset)	O
SPCSO2	SPC	Generic single point controllable status output (CB Open Command)	O
SPCSO3	SPC	Generic single point controllable status output (CB Close Command)	O

4.2 Logical Node: ALM_GGIO1

Description: Generic Process I/O

LN Class: GGIO

Data Object	CDC type	Description	M/O
Common Logical Node Information			
Beh	ENS	Behavior	M
Status Information			
Alm1	SPS	General Single Alarm (Protection Healthy/Active)	O
Alm2	SPS	General Single Alarm (Local Parameter Setting change)	O
Alm3	SPS	General Single Alarm (Relay Error)	O

4.3 Logical Node: IND_GGIO2

Description: Generic Process I/O

LN Class: GGIO

Data Object	CDC type	Description	M/O
Common Logical Node Information

4.18 Logical Node: RBRF1**Description:** Breaker Failure**LN Class:** RBRF

Data Object	CDC type	Description	M/O
Common Logical Node Information			
Beh	ENS	Behavior	M
Status Information			
OpEx	ACT	Breaker Failure External Trip	M

4.19 Logical Node: RDRE_DIFF

Description: Disturbance Recorder Function

LN Class: RDRE

Data Object	CDC type	Description	M/O
Common Logical Node Information			
Beh	ENS	Behavior	M
Status Information			
RcdMade	SPS	TRUE = disturbance recording complete	M
FltNum	INS	Fault Number	M

5. Enum types

Enum types are listed in this clause.

5.1 Mod

Value	Description
1	on
2	blocked
3	test
4	test/blocked
5	off

5.2 ctlModel

Value	Description
0	status-only
1	direct-with-normal-security
2	sbo-with-normal-security
3	direct-with-enhanced-security
4	sbo-with-enhanced-security

5.3 Health

Value	Description
1	Ok
2	Warning
3	Alarm
